

CAL CUT 2841

MINIMUM QUANTITY LUBRICANT

CAL CUT 2841 has been specially formulated for medium to heavy duty metalworking and metal forming operations. It performs well in milling, machining, threading, forming, stamping, cutting, and other similar operations, including minimum quantity lubrication (MQL) or mist-type applications.

CAL CUT 2841 contains vegetable-derived lubricants and EP additives yielding excellent tool life. The low surface tension wets out metal surfaces promoting delivery of the lubricant evenly to all surfaces. This wetting action also improves heat transfer, keeping the tool cool to help maintain dimensional tolerances and extend tool serviceability.

CAL CUT 2841 can be used on all ferrous and non-ferrous substrates and is easily rinsed with water.

TYPICAL CHARACTERISTICS

Appearance:	Clear, pale yellow
Form:	Liquid
Odor:	Fatty
Solubility in Water:	Dispersible
Specific Gravity (68 °F):	0.936
